

Press Release

SentinelOne and Schwarz Digits Forge Strategic Partnership for Sovereign Cybersecurity in Europe

- **Market Signal:** SentinelOne strengthens its commitment to Europe, partnering with Schwarz Digits to deliver a sovereign offering.
- **The Strategic Partnership** combines SentinelOne's AI-powered Singularity™ Platform with STACKIT's certified sovereign cloud infrastructure.
- **Highest Security Standards:** The solution allows all data to remain in Germany and to be subject to the General Data Protection Regulation (GDPR).

Neckarsulm, Germany – September 8, 2025 – In a market environment shaped by geopolitical uncertainty, digital sovereignty has become a critical foundation for Europe's stability and innovative strength. Responding to the urgent need for trustworthy and holistic IT-security solutions, SentinelOne, a global leader in cyber security, and Schwarz Digits, the IT- and digital-division of the Schwarz Group, are entering into an exclusive partnership starting in September 2025.

A Sovereign Cybersecurity Alternative for Europe

The partnership combines SentinelOne's cyber security platform with STACKIT's certified, highly secure sovereign cloud infrastructure. STACKIT is the sovereign cloud provider of Schwarz Digits. This provides public and private sector organizations with an autonomous, AI-powered cyber security platform that covers the full lifecycle of information and operating technology (IT/OT) security, from identification and protection to detection, response, and recovery of sophisticated attacks. SentinelOne and Schwarz Digits are collaborating to create a sovereign digital security solution in Europe that complies with strict European data protection requirements.

Rolf Schumann, Co-CEO, Schwarz Digits: "In Europe, we must use and further develop cutting-edge technology without giving away our data. Otherwise, we will lose our innovative strength and economic power. The partnership with SentinelOne is the perfect example of how technology openness and data sovereignty can be reconciled."

Christian Müller, Co-CEO, Schwarz Digits: "We provide the secure and compliant infrastructure on which SentinelOne can offer its leading-edge holistic Cybersecurity suite. This synergy creates tremendous value for the market and strengthens the digital resilience of the European economy and public sector."

Tomer Weingarten, CEO, SentinelOne: "Our European customers are demanding security solutions that combine state-of-the-art protection with full data sovereignty. Partnering with Schwarz Digits enables us to meet this demand - giving customers in highly regulated industries the confidence to embrace AI-powered cybersecurity without compromise."

Leading AI Security Meets Sovereign European Cloud

The SentinelOne Singularity™ Platform protects enterprise workloads across endpoints, cloud, and identities, with more than 11.000 clients worldwide. It leverages artificial intelligence and behavioral analysis to autonomously detect and repel threats like ransomware in real time at machine speed.

STACKIT, as a sovereign cloud provider, delivers a scalable and secure cloud infrastructure from high-security data centers located in Germany and Austria. Its services are GDPR-compliant and certified according to the highest European and international standards, including ISO 27001 and the C5 criteria of the German Federal Office for Information Security (BSI).

For European companies and organizations, a fully sovereign security platform is paramount. German customers can already leverage XM Cyber's leading CTEM platform via STACKIT. XM Cyber empowers security teams to prioritize and remediate critical security gaps by visualizing vulnerabilities, misconfigurations, and identity risks within an attack graph. This uncovers potential attack paths across both cloud and on-premise environments. By porting SentinelOne's industry-leading SecOps platform with STACKIT, European customers will gain access to the most comprehensive, high-performance sovereign security solutions for critical SecOps and Continuous Exposure Management needs.
